  theme_minimal()
```

i

The variables, the coefficient estimates, p-values, AIC, BIC, and VIF for the model are shown above.

5 fold cross validation was choosing. Different cross validations like 10,15,20 were tried but since we have less data, lower folds is better.

The Cross Validated rmse and r-square are reported in the summary table below.

ii

The model has Non constant Error Variance. Meaning the assumption of linear regression is not met. Transformations were tried and it were no avail. Its better to use non-linear models.

There were outliers but they were pf low leverage. Only two outliers were removed.

1b. PLS Model

```
# PLS
cv_control <- trainControl(method = "cv", number = 5)

tune_grid <- expand.grid(ncomp = seq(25,35, length = 50))

# Train PLS model using caret
pls_model <- train(logSalePrice ~ .,
                  data = housingDataProcessed,
                  method = "pls",
                  trControl = cv_control,
                  tuneGrid = tune_grid
                  )

pls_model
```
